patent No. 675919

GENERAL INFORMATION:

APPLICANT: Li, Yi

APPLICANT: Li, Xi

TITLE OF INVENTION: Antibodies to Human G-Protein Chemokine Receptor HDGNR10

TITLE OF INVENTION: (CCRS Receptor)

TITLE OF INVENTION: ANTibodies to Human G-Protein Chemokine Receptor HDGNR10

TITLE OF INVENTION: (CCRS Receptor)

TITLE OF INVENTION: (CCRS Receptor)

TITLE OF INVENTION: ANTIBOR: 1999-06-25

PRIOR APPLICATION NUMBER: 1999-06-25

PRIOR PELING DATE: 1998-11-18

PRIOR APPLICATION NUMBER: 09/195,662

PRIOR PRIOR OATE: 1998-11-18

PRIOR PRIOR OATE: 1998-11-18

PRIOR PRIOR PLILING DATE: 1998-10-06

NUMBER OF SEQ ID NOS: 9

SOFTWARE: PatentIn version 3.0

                                                                                                                                         degenerate oligo primers were designed corresp. to the conserved sequences R79167 in the second and R79168 in the third transmembrane domains of the MIP-lalpha/RANTES receptor, the IL-8 receptors and the HWGTRS corptor to the conserved sequences R79167 in the second and R79168 in the third transmembrane commands of the MIP-lalpha/RANTES receptor, the IL-8 receptors and the HWGTRS corptor are copied as the IL-8 receptors and the HWGTRS corporating EcoRI and XhoI sites at their 5' ends are 096299 and incorporating EcoRI and XhoI sites at their 5' ends are 096299 and incorporating EcoRI and XhoI sites at their 5' ends are 096299 and incorporating EcoRI and Adrived from MMG cells with the primers yieled a number of ECR products. One CDNA appeared to encode a novel protein. To obtain a full-length version of this clone, a MMG cDNA library was constructed in pERGG and probed with the PCR product. A 2.1 kb cDNA clone was obtd. Analysis of additional clones in the MMG cDNA library revealed a second sequence that was identical to the 2.1 kb cDNA sequence first obtd. From the 5' UTR through the putative seventh sequence from how contained a different cytoplasmic tail. The second sequence appears to represent alternative splicing of the carboxyl terminal tail of the MCP-IR protein. The two sequences are denoted MCP-terminal tail of the MCP-IR protein. The two sequences are denoted MCP-IR has a predicted mol. wt. of about 42,000 daltons. MCP-IRB has a mol. correct PN

DNA encoding human monocyte chemoattractant protein 1 receptor - used to treat tumours and inflammatory, viral, infectious, allergic, diabetic and central nervous system diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents human monocyte chemoattractant protein 1 (MCP-1) receptor protein. The MCP-1 receptor protein and encoding DNA are used for the prevention and treatment of tumours and inflammatory, viral, infectious, allergic, diabetic and central nervous system diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chemokine; tumour diagnosis; colorectal; prostatic; organ rejection; inflammation; autoimmune disease; metastasis; bronchial asthma; lupus; chronic bowel inflammation; rheumatoid arthritis; cytostatic; antiinflammatory; antiasthmatic; immunosuppressive; dermatological; antirbeumatic; antirrhritit; antirathritic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                      This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (rheumatoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, disestive, endocrine, motor or urogenital systems or skin are affected, and bone (marrow diseases. The products of the invention are chemokine derivatives which have cytostatic, antiinflammatory, antisathmatic, immunosuppressive, dermatological, antirheumatic, antiarthritic.

Chemokines act on specific tumor and inflammatory cells through a constellation of these cells. Ad880045-A4880128 represent human chemokine fragments used to illustrate the method of the invention

RESULT 4

```
The invention relates to diagnosing atherosclerosis (or susceptibility to) in a subject by determining expression or activity of the human CCR2-61 polypeptide (a polymorphic variant form of the human CCR2-fet propertied (a polymorphic natiant form of the human CCR2-fet polymorphic mucleotide polymorphic min codon 64 of the polymorleotide encoding the CCR2-fet polymorphism in codon 64 of the polymorleotide encoding polymorphic variants are associated with a lower incidence of atherosclerosis. The presence or amount of CCR2-fet polymorphic variants are supences of the invention can be used for also be analysed. The sequences of the invention can be used for predicting the response of a patient to drug treatment, for predicting the disease outcome in a patient and also for the production of a treatment for hypercholesterolaemia. The sequence represents the wild-type receptor polypeptide CCR2-64V
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 MLVVLILLINCKKLKCLTDIYLLNLAISDLLFLITLPLWAHSAANEWVFGNAMCKLFTGLY 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents human chemokine receptor CCR2. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis, pneumonia or asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HIGYFGGIPFIILLTIDRYLAIVHAVPALKARTVTFGVVTSVITWLVAVFASVPGIIFTK

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABPR2019 to ABPR3019) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related ciseases, cell regeneration-related diseases, growth-related ciseases, cell regeneration-related diseases, e.g. AIDS, Alzheimer's disease,

This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anticobesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HWG1-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obseity and diabetes. The present invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) or invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) or invention describes and the encoded proteins thereof were this method novel nucleotides and the encoded proteins thereof were denoted and adiposences specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, these compositions exhibit anorectic, antidiabetic and cobesity. These compositions exhibit anorectic, antidiabetic and obesity. These compositions exhibit anorectic, antidiabetic and chapter of a murine adipocyte specific protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polywaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency with hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaping, expondylitis. The PRO proteins are also useful separes The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300

The invention describes an isolated polynucleotide comprising a sequence encoding the polypeptide comprising a 355 residue amino acid sequence, given in the specification, a sequence encoding the polypeptide expressed by the DNA contained in ATCC Deposit No. 97187, a sequence that hybridises with, or that is at least 70 % identical to them, or a sequence fragment of them. The polynucleotide is useful for preparing a composition for diagnosing or treating asthma, acute heart failure, hypertension, osteoporosis, allergies, dementia or ulcers. This is the amino acid sequence of human monocyte chemoattractant protein 1 receptor starting at residue 40 and used in a comparison with human G protein
                                                                                                                                                                                                                       301 NPIIYAFVGEKFRRYLSVFFRKHITKRFCKQCPVFYRETVDGVTSTNTPSTGEQEVSAGL 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide, useful for preparing a composition for diagnosing or treating e.g. asthma, acute heart failure, hypertension, osteoporosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disorders associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

To identify and clone new members of the chemokine receptor gene family, degenerate oligo primers were designed corresp. to the conserved sequences R79167 in the second and R79168 in the third transmembrane domains of the MIP-lalpha/RANTES receptor, the IL-8 receptors and the HUMSTRS orphan receptor (GenBank Accession #M99293. The degenerate oligo incorporating ECORI and XhoI sites at their 5' ends are (96299 and conspired) any mapper of CDNA derived from MM6 cells with the primers yieled a number of FCR products. One CDNA appeared to encode a novel protein. To obtain a full-length version of this clone, a MM6 CDNA library was constructed in pFROG and probed with the PCR product. A 2.1 kb cDNA clone was obtd. Analysis of additional clones in the MM6 CDNA library revealed a second sequence that was identical to the 2.1 kb cDNA clone was obtd. Analysis of additional the puterive seventh transmembrane domain but contained a different cytoplasmic tail. The second sequence appears to represent alternative splicing of the carboxyl terminal tail of the MCP-IR protein. The two sequences are denoted MCP-IR has a predicted mol. Wt. of about 42,000 daltons. MCP-IRB has a mol. Wt. of about 42,000 daltons. Correct PN engles and predicted mol. Wt. of about 42,000 daltons. Correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases.

Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (rheumation, respiratory, nervous, diseases), and or inflammation, worth or urogenital systems or skin are affected, and bone marrow diseases. The products of the invention are chemokine derivatives, which have cytostatic, antiinflammatory, antiathmatic, which have cytostatic, antiinflammatory, antiathmatic, antiarthritic.

Chemokines act on specific tumor and inflammatory cells through a constellation of chemokine receptors (CR), which control migration and proliferation of these cells. Adg80045-AA0680128 represent human chemokine fragments used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ω

The polypeptide sequences are useful in isolating DNA clones encoding the chemokines, for generating antibodies, and for predicting oligonucleotides for screening a library to isolate species variants. A nucleic acid encoding a chemokine polypeptide can be used to identify genes, mRNA and cDNA species which encode related or homologous ligands, as well as DNA encoding homologous proteins from different species. The chemokines and antibodies which bind to the polypeptides are useful in the treatment of conditions associated with abnormal physiology or development, including inflammatory conditions such as asthma, abnormal proliferation, regeneration, degeneration and atrophy. This sequence represents the human chemokine receptor-2 (CKR-2) polypeptide, used in the scope of the invention
                                                                                                                                                                 Human, thymus expressed chemokine; TECK; chemokine; MIP-3alpha; receptor; MIP-3beta; dendritic cell receptor for chemokine; DC CR; M/DC CR; asthma; moncyte/dendritic cell receptor for chemokine; inflammatory condition; abnormal proliferation; degeneration; atrophy; antinflammatory; antiasthmatic; cytostatic; chemokine receptor-2; CKR-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121 HIGYFGGIFFIILLTIDRYLAIVHAVFALKARTVTFGVVTSVITWLVAVFASVPGIIFTK 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 MLVVLILINCKKLKCITDIYLLNIAISDLLFLITLPLWAHSAANBWVFGNAMCKLFTGLY 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MLSTSRSRFIRNTNESGEEVITFFDYDYGAPCHKFDVKQIGAQLLPPLYSLVFIFGFVGN 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New chemokines, TECK, MIP-3 alpha, MIP-3 beta, DC CR and M/DCCR, useful for treating conditions associated with abnormal physiology or development, including inflammatory conditions (e.g. asthma), and abnormal proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MLSTSRSRFIRNTNESGEEVTTFFDYDYGAPCHKFDVKQIGAQLLPPLYSLVFIFGFVGN

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially respressed in an animal subjected to pain and a first that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the cutvity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more

polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

3: pir3:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
